

Variante kitchen

Variante kitchen, which represents new, groundbreaking thinking in the world of kitchens, provides its users with a kitchen solution that is beautiful, versatile, and takes into account the individualistic needs of the user, as well as the changing needs of the future, making independent working possible for everyone.

The innovative and reliable technical and structural solutions of the kitchen represent the latest know-how.

Adjustment of dimensions

- Adjustment of worktop +650 - +950. The worktop, the upper and the lower cabinets move simultaneously in the vertical direction.
- The upper cabinets are located at the correct height for the user. Persons who work in a sitting position can also reach them.
- The horizontal adjustment of upper cabinets changes the horizontal distance between the front edge of the worktop and the upper cabinets.
- The upper cabinets are available with pull-out shelves.
- The lower drawer cabinets move by a light touch of the hand and return into the front position by pressing a push switch.
- The height adjustment happens electrically. Alternative control devices. Horizontal adjustments can easily be performed manually or electrically.

New-generation kitchens for everybody and everywhere

Variante kitchen is suitable for any user groups, such as users of various age and stature and having varying capability on moving. For a single user or for joint use.

Life cycle characteristics

The kitchen allows for the user's individual needs, both current and future. It serves its users in any life situation. The easy and safe everyday use allows anybody to work independently.

Ergonomy

The adjustability and modifiability of the kitchen is brought into everyone's reach. The user will always be allowed the optimal working position. Work in the kitchen can be done in a sitting or a standing position. All the cabinets are easily reachable.

Operating Safety

The need for climbing has been eliminated. The low-positioned upper cabinets are easy to use. The pull-out shelves provide even greater ease of use. In Variante kitchen the chair is for sitting – not for climbing.

Variante kitchen is a functional unit, in which the kitchen machines and appliances and the associated pull-out shelves are always ergonomically and safely placed for any situation.

The new type of lighting contribute essentially to working safety.

Adjustment of dimensions

The support framework which stands freely on the floor enables the stepless 3-dimensional user specific settings of the kitchen:

- **Applications with electric automation:** Intended for user-specific adjustment during everyday use or in jointly used kitchens. Electric shift mechanisms can be added later.

- **Occasionally adjusted applications:** Suitable for kitchens that do not require daily adjustment, such as a single person's kitchen or kitchens for joint use under certain conditions. The vertical adjustment of the kitchen furniture is locked into the selected height of the worktop. If necessary, the dimensioning can be readily readjusted. In fact, the application is a traditional home kitchen with innovatory functional and ergonomic features. Horizontal adjustments are always available in both applications.

The innovative and reliable technical and structural solutions of the kitchen represent the latest know-how. The adjustments are ensured by control and safety techniques that meet international safety requirements.

Design

The freely chosen cabinet frame, door and worktop materials and the kitchen machines and appliances offer kitchen units composed entirely according to the clients personal taste and their special requirements in each case.

Variante kitchen concept provides entirely new dimensions for kitchen design. It is suitable for stylish country house kitchens or say, ultramodern open-plan kitchens.

Adjustable cabinets for cleaning supplies

Homes, service homes

Rehabilitation centers

Household classes in schools

The Variante kitchen is a patented product that has been developed and manufactured in Finland.
